

RFID-based Identification System in a Hospital

Is it the end of errors?

IoT Conference, ETH Zurich 2008

Agenda

- The Spital STS company
- ICT and hospitals: why ? Why so late?
- RFID in hospitals : just a hype?
- The IDEF-IS project
- Conclusion

The Spital S_{immental}-T_{hun}-S_{aanenland} AG

Agenda

- The Spital STS company
- ICT and hospitals: why ? Why so late?
- RFID in hospitals : just a hype?
- The IDEF-IS project
- Conclusion

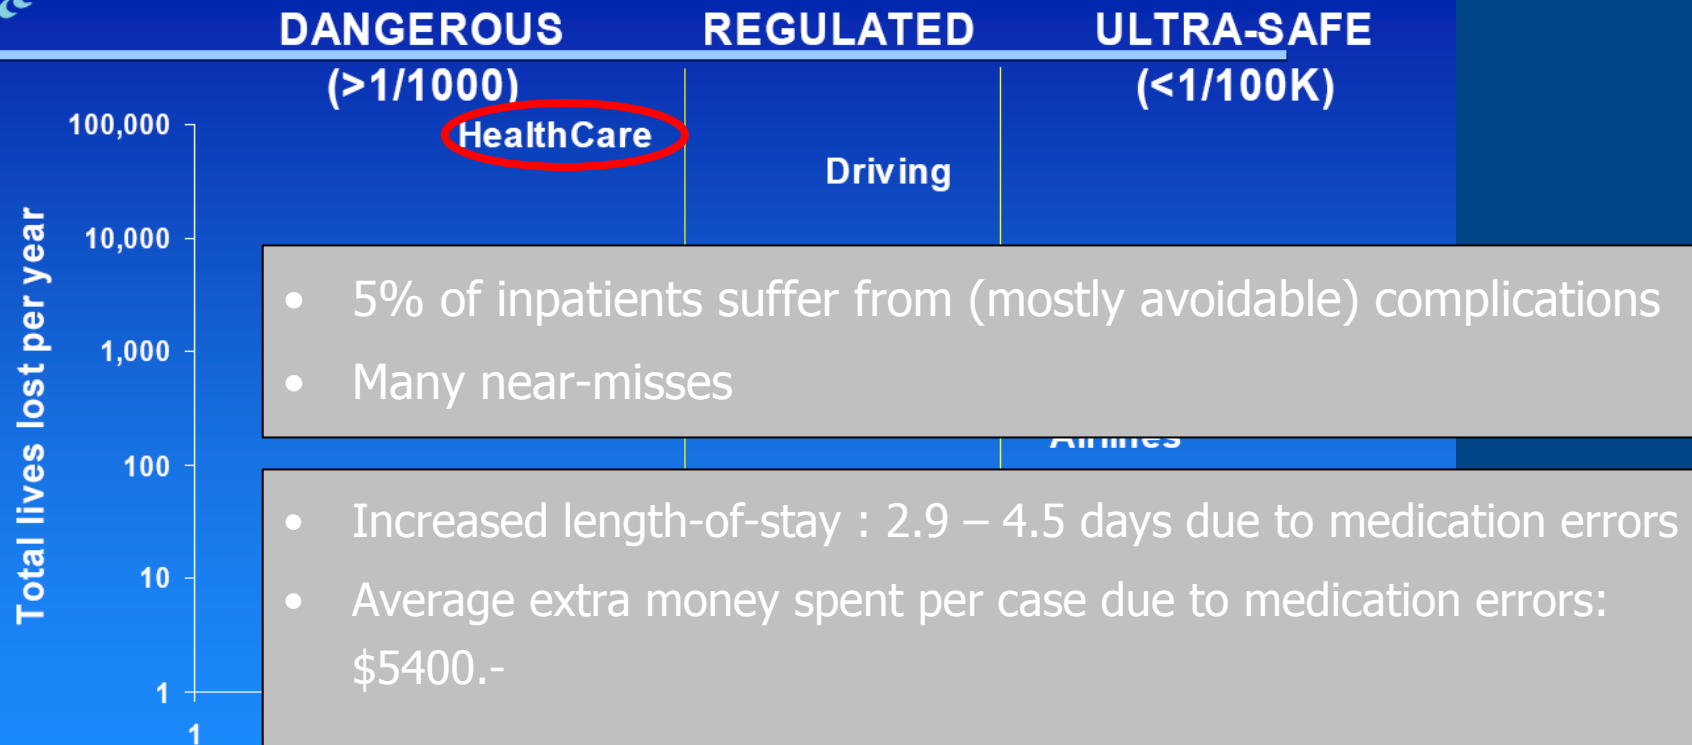

Healthcare, ICT and errors

- Healthcare is not „just another industry“
- Healthcare institutions considered to be complex adaptive systems
- Non-linearity of patient trajectory / many stakeholders / unpredictability
- ICT systems *might* improve patient safety / outcomes
- To Err is human / To Err is system
- Same systems, different outcomes
- Same location, different outcomes
- Socio-technical considerations *most* important

Healthcare, ICT and errors (2)

How Hazardous Is Health Care?

ANALYSIS

Background: transfusions

- Transfusion-related problems (reporting bias...) CH und U.K. :
 - near miss 1/ 340 transfusion
 - Proceeded, completely incompatible transfusion: 1:100'000
 - Thun: 5'100 transfusions /y, but : incompatible transfusion 1/24 months
- Under-reporting is considered to be immense

Critical incident reporting system

- CIRS :
- 50% of reports due to wrong identifications (patients, blood samples, drugs...), 2-4 reports /week
 - *„Blood sample coming in to the laboratory with wrong ID-label on the tube“*
 - *„Wrong patient in wrong bed: after surgery, patient „M“ is put in bed from patient „L“. Written identification remains on bed.,“*
 - *„G.P. sends patient A for a blood sample and further treatment to the emergency ward. Blood sample is taken, history of the patient does not correspond to the referral letter. In the meantime, G.P. phones to alarm ER personnell: he sent the wrong patient....“*

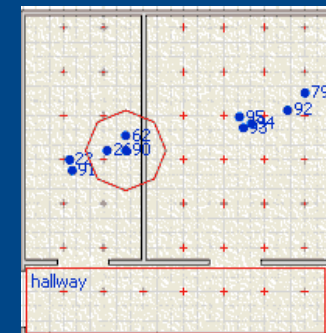

Aims for an identification system

- Right patient
- Right time
- Right plan (to act): prescription e.g.
- Right action
- Right resource
- Right person
- Right place
- Additionally: maximize process-quality/process-knowledge/profit

Agenda

- The Spital STS company
- ICT and hospitals: why ? Why so late?
- RFID in hospitals : just a hype?
- The IDEF-IS project
- Conclusion

Possible areas

RFID: Pros

- Pluripotent compared to barcoding
- Better information/data carrier
- Unique *per se* (without further intervention: UID)
- No 'line-of-sight' problem (!)
- Increasingly available industrial solutions (?)
- Less interfaces / seamless integration

RFID: Cons

- Hardly any experiences in healthcare
- Data protection
- Healthcare environment (xR, ICU, telemedical devices)
- Setting (desinfectants, sterilisation, liquids)
- Patient trajectories (inpatients, outpatients, pts leaving hospital for a few hours)
- Costs

How to tag

- Activ vs. passive
- UHF vs. HF
- UID vs. Hospital-own-ID
- Data vs. ID
- Re-tagging (everything) or only ,on-demand`

Idef-IS (Identification Information System)

- Identification-Information-System STSAG
- 7 R + 3 M
- Cost efficient
- Implementation of existing infrastructure
- Implementation of existing identifications
- Standardisation within the company at least
- Low budget (< 30'000\$), high performance
- High usability, high simplicity

Components IdefIS (2)

- Passive Tags (ISO 15693, 13.56 MHz), Precision Dynamics ®
- No new barcoding
- No additional information on tag
- Combined reader RFID/barcode linked to laptop
- Software: patient care information system PCIS (SQL, Phoenix®)
- EAN generation

Components Idef-IS

IdeflS: who's who? Good thru? Related to?

Blutentnahme Labor

Auftrag für Blutentnahme/-untersuchung

Blutentnahme

☒ morgen
☐ sofort
 ☒ venös
☐ kapillär
 ☐ nach Dialyse
☐ vor Dialyse

Hämätologie

☒ kleines Blutbild
☒ großes Blutbild
☐ Diff. autom.
☒ Retikulozyten (%)

Proteine

☒ Protein gesamt
☐ Albumin
☐ CRP
☐ Ferritin
☐ Transferrin
☐ BNP
☐ Procalcitonin

match

Blood sample

So far...

- ~ 2000 identified patients
- ~ 5000 cross-checked blood samples (40 mismatches)
- > 500 safe transfusion (0 mismatch)
- No software problems
- **Hardware problems !** Not many industrial solutions for combined readers!
Not many solutions for healthcare environment, need for feedback/processing real-time
Need for notebook-alternatives (failed: Motion C5).
Work in progress for Windows CE application

Things are in place, but where's the Internet?

Internet of Things, 2008 Thank you!
